

GLEASON PowerFlex

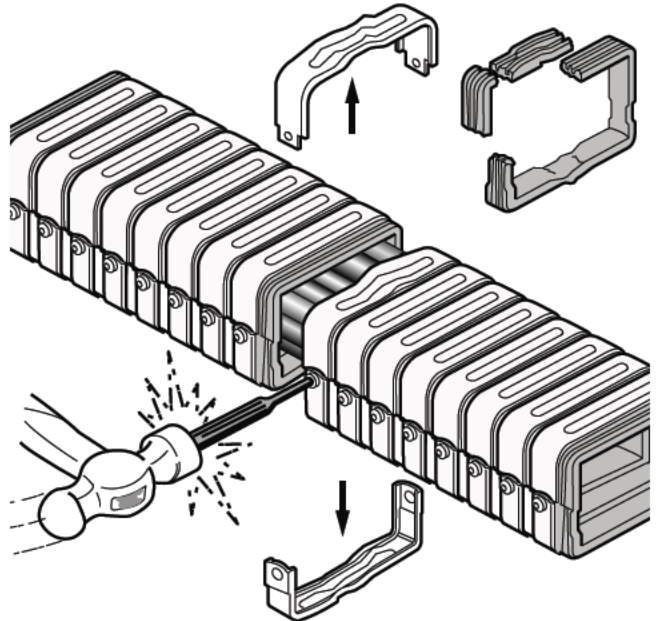

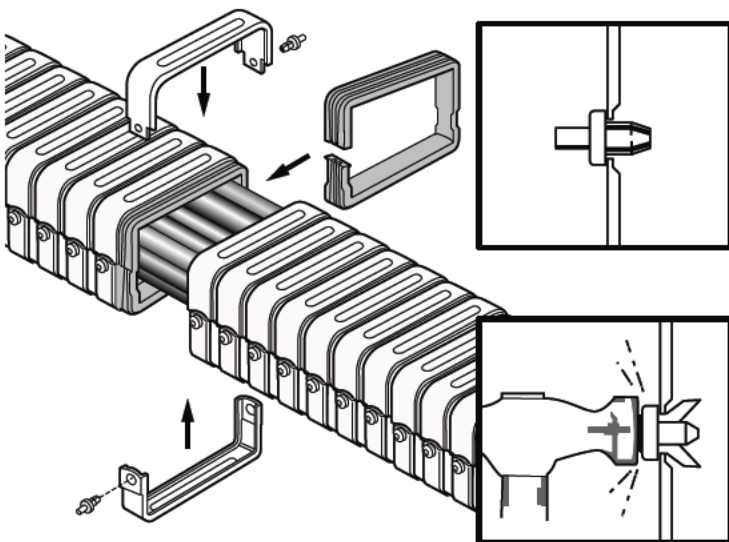

The fully modular, fully enclosed cable/hose carrier

Modular design makes it possible to alter the carrier's length, on site, in minutes. The unique construction allows complete flexibility in designing your machine travel and simplifies installing carriers on machines where required carrier length is not known.

In addition to altering overall length, it is possible to repair PowerFlex while it is installed on your machine...without having to disconnect hoses or cables or the PowerFlex itself. Repairs can be made in minutes without having to pull out every hose/cable or replace the entire carrier.

To shorten or lengthen PowerFlex, use a 3/32" punch to drive posts out of rivets securing mounting bracket (above) or links (below). Add or remove links as required. Insert new drive rivets and seat post with hammer as shown in lower left illustration. To repair damaged PowerFlex, remove damaged links and replace. Repairs can be easily made without removing and restringing cables or hoses because nylon inner liners in repair kits are split.
